

# Starlight Express pendant (Zoltan Kisjuhasz - Gyöngysziget)

## Beads:

- (A) – Matubo Miniduo (30db)
- (B) – Czech Mates Diamond (10db)
- (C) – Miyuki Rocaille 15/0
- (D) – Miyuki Half Tila (10db)
- (E) – Swarovski Bicone 3mm (10db)
- (F) – Swarovski Rivoli 18mm (1db)

## Step 1

Pick up B + C + A + C then go back through the free hole of the B bead and pick up C + A + C on the other side. Go through the B + C + A beads from the beginning of this step and finally go through the free hole of the A bead. This will be the base unit of our pendant.

## Step 2

As you come out of the A bead pick up C + B + C + A + C then go back through the free hole of B and pick up C on the other side then through the initial A and back through C + B + C + A from the beginning of the step and then through the free hole of the A bead. Repeat until you get 10 each of A and B. Note that when you connect the „chain” there already will be an A bead on the other side of B. Also, make sure that your „chain” does not twist before you connect the ends.

## Step 3

Come out of any C bead and connect the C's with D beads as shown on the picture. This will be the backside of the pendant.

#### **Step 4**

Transfer to the free hole of any of the D beads and connect them with 2 x C.

#### **Step 5**

Transfer to the „front” of the pendant and come out of any of the C beads and connect them with 5 x C as shown on the picture.

#### **Step 6**

Using the same C beads as at the beginning of the previous step connect these C's with C + A + C.

#### **Step 7**

Connect the A beads from Step 6 with C + A + C and then connect the new A beads with E beads. Before pulling the thread tight put F in place and tighten the thread. Once you are finished fix the 5 x C's on the side so that they have a triangular shape.
